**Harvesting Energy from Vibration Absorber under Random**

A dynamic vibration absorber is a passive device used often to reduce the vibrations in host structures. The potential of harvesting energy out of the motion of vibration absorber has shown promise under harmonic excitations.

**Group mathematics Wikipedia**

A theory has been developed for finite groups, which culminated with the classification of finite simple groups, completed in 2004. Since the mid-1980s, geometric group theory, which studies finitely

generated groups as geometric objects, has become a particularly active area in group theory.
