In uence of the electric current waveform on the dynamic

response of the electrified composites dynamic mechanical response of the electrified composite plate subjected to impact and various electro-magnetic loads(DC, AC, pulsed electric currents and a constant magnetic field) is analyzed by solving a coupled system of equations of motion and Maxwell's equations in the composite plate. The results show that the dynamic response of the plate is

Mechanical properties of infiltration processed composites In this study, we used a testing load of 10 kgf, and the hardness and fracture toughness data were displayed in Table 1 . The low hardness of pure alumina (0A) can be related to the probably universal grain size effect reported by Krell and Blank [1] .

Influence of the electric current waveform on the dynamic

The influence of the electric current waveform (DC, AC and pulsed currents) on the dynamic electromagnetic, thermal, and impact response of the composite plate is studied. The analysis includes solving Maxwell s equations in the electrified composite plate to determine an electric-current induced
