Asymmetric Rotating Disc Contactor ARDC Reactive

An Asymmetric rotating disc contactor (ARDC) column is used as a counter current continuous extractor. A liquid feed is contacted several times with an immiscible solvent that exhibits preferential affinity towards desired components.

Reactive Extraction An Intensifying Approach for

Reactive extraction is a multifunctional reactor having reaction and extraction in a single unit. This intensified approach has the closed loop process with sustainability. In present paper, the concept of reactive extraction and effect of various parameters were discussed. These studies are very useful in the view of complete design of a reactive extraction process for the carboxylic acid

Sequential extraction and reactive extraction processing

It is a reactive extraction process using catalyzed alcohol as the biodiesel reagent and extraction solvent. An alkaline catalyst (such as NaOH or KOH) and methanol are generally used in this process. This methoxide solution (i.e., the mixture of the alkaline catalyst and methanol) converts the triglycerides inside the SCGs into biodiesel and glycerol, which are completely dissolved in the

Reactive extraction of carboxylic acids using organic

Reactive extraction using supercritical CO₂ and TOA is an effective method for the separation of tricarboxylic acid, e.g., citric acid from an aqueous solution. Citric acid is practically not separable by using physical extraction, so the application of a complexing reactant is necessary to achieve an effective separation of citric acid by using supercritical CO₂.
