There is now growing evidence that human testicular germ cell cancer originates from fetal germ cells exhibiting an aberrant programme of gene expression, and tumour progression may be favoured by an aberrant Sertoli cell-germ cell communication.

### **Regulation of Sertoli cell and germ cell differentiation**

Male factor infertility, in addition, may be caused by testicular germ cell cancer, which is known to represent the most common cancer among young men in Western industrialized countries. There is growing evidence that this cancer originates from fetal germ cells exhibiting an aberrant programme of gene expression and that tumour progression may be favoured by an aberrant Sertoli cell-germ

### **Regulation of Sertoli Cell and Germ Cell Differentiation**

The intention of the present monograph is to shed more light on the regulation of Sertoli cell and germ cell differentiation. Involving knockout and transgenic mouse models, we focus on (1) male factor infertility that might be related to altered maturation of Sertoli cells, (2) male factor infertility that might be due to incorrect histone-to-protamine exchange in haploid spermatids, and (3

A Sertoli cell (a kind of sustentacular cell) is a "nurse" cell of the testicles that is part of a seminiferous tubule and helps in the process of spermatogenesis, the production of sperm.

### **Sin3a Is Required by Sertoli Cells to Establish a Niche**

The male GSC niche in mice and humans is less defined. One component of the niche that plays a predominant role in regulating GSCs is the Sertoli cell, which maintains constant physical contact with

all of the germ cells inside seminiferous tubules. The influence Sertoli cells have upon germ cells is profound. Two essential proteins that are expressed by Sertoli cells, and which ensure the survival of germ cells, are Steel (KITL) and glial cell line-derived neurotrophic factor (GDNF). Steel

#### **Regulation of Sertoli Cell Myotubularin rMTM Expression**

Sertoli-germ cell cocultures and Sertoli cells incubated with increasing germ cell derived proteins have shown that the high level of testicular rMTM expression in the testis might be maintained by germ cells. Although work remains to be done to delineate the role of rMTM in the testis, these results illustrate that germ cells play a very active role in regulation testicular function by
